WHY WE RECOMMEND NEW TECHNOLOGY SERVICE

HOT OIL ENGINE FLUSH

No matter how meticulous you are about oil changes, there are areas inside every engine where oil does not circulate well. Here, oil collects where it slowly becomes thick from heat, creating sludge that circulates and eventually restricts the movement of oil throughout the engine. This service cleans all accumulated deposits from the crankcase and includes our **premium** lubrication service. • **Have a Hot Oil Flush every 24,000 KM or after an extended oil change interval**

BRAKE FLUID FLUSH

Brake fluid attracts water like iron to a magnet; moisture can even be drawn into the fluid through pores in the rubber brake system components. This moisture combines with available oxygen, causing oxidation of the fluid which leads to the corrosion of components causing leaks or expensive failures. A moisture content of just 4% can reduce the boiling point of the fluid to cause brake fade under emergency conditions. • **Have a Brake Fluid Flush every 42,000 KM**
