AMVOX2 RAPIDE TRANSPONDER

The AMVOX2 Rapide Transponder watch is a unique new timepiece created jointly by Jaeger-LeCoultre and Aston Martin to reflect the extraordinary versatility and design purity of the Aston Martin Rapide. The second edition of a revolutionary creation that sealed the ties between the pioneering engineering of Aston Martin and the exceptional watchmaking expertise of Jaeger-LeCoultre, the Rapide Transponder watch is a piece of horological art that is as functional as it is elegant: featuring an integrated transponder circuit, it allows its owner to unlock or lock their Aston Martin Rapide by pressing the watch's sapphire crystal.

This elegant new timepiece has no push buttons: the vertical trigger system of mechanical levers patented by Jaeger-LeCoultre allows the chronograph to be started, stopped and reset simply by pressing the sapphire crystal. An integrated miniaturised transmitter system means the sapphire crystal can also be used to control access to the owner's Rapide. As the driver nears the car, they simply touch the 'OPEN' position on the watch glass (between 8 and 9 o'clock) and the door-opening system is activated. Touching the 'CLOSE' position (between 3 and 4 o'clock) locks the car again.

The unique connection between Jaeger-LeCoultre and Aston Martin is evident elsewhere on the watch, too. The exquisitely detailed dial features a gilded Rapide logo that appears to be floating in the centre of a window revealing the ruthenium mainplate and bridges of the intricately crafted movement. The movement operating indicator carries a subtle Aston Martin emblem and the ruthenium grey bridges and black background evoke the look of the Rapide's instrument panel. The outer dial ring, meanwhile, has an opening that allows a tantalising glimpse of the chronograph functions – just as the slender wheel rims of the Rapide expose the mighty brake calipers behind.

Created specially for Aston Martin Rapide owners, the AMVOX2 Rapide Transponder watch is an engineering masterpiece in miniature, its beauty and functionality standing as testament to the inspiration and expertise of the partnership that created it.

- The transponder module is not only built in miniature to fit inside the watch case, but features geometry and wiring that have been completely redesigned from a watchmaker's perspective – a feat of technical inventiveness that required 18 months of dedicated engineering work.
- Unlike the chronograph vertical trigger mechanism, in which the entire case pivots, the locking system uses capacitive technology to react to contact with the 'OPEN' and 'CLOSE' zones.
- The AMVOX2 Transponder may be used to unlock the Rapide at a distance of up to 10 metres.
- Contact with the 'OPEN' and 'CLOSE' zones simultaneously activates a 'find me' function, in which the car's headlamps illuminate for several seconds, enabling its owner to locate it easily.
- Since a mechanical watch protects its movements from the influence of electrical fields that may adversely affect its precision, the antenna for the transponder is metallised on the inside of the sapphire crystal.

For further information, please contact your Aston Martin dealership. To discover the full AMVOX collection, visit [www.jaeger-lecoultre.com](http://www.jaeger-lecoultre.com).

The push-button-free mechanical chronograph is operated by pressing down on the sapphire crystal

## AMVOX2 RAPIDE TRANSPONDER

The two-tone casing of this unique timepiece uses satin-finish 18-carat pink gold and brushed titanium. Handcrafted by Jaeger-LeCoultre, it is available exclusively to Aston Martin Rapide owners

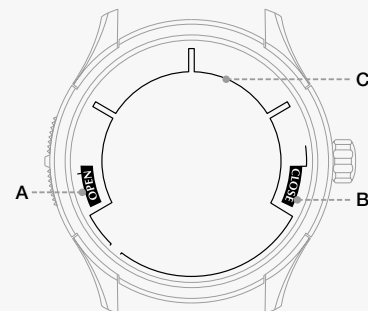

No displacement of the casing is required to use the transponder function, which operates via touch-sensitive zones

**A Open**  
Touching the 8 o'clock position activates a signal that opens the Rapide

**B Close**  
To lock the car again, you simply touch the 'CLOSE' position at 4 o'clock

**C Antenna**  
Metallised inside the sapphire crystal, the antenna is integrated into the design

**JAEGER-LECOULTRE**
