Fluid Maintenance Service Catalog

Automatic Transmission System Fluid Exchange

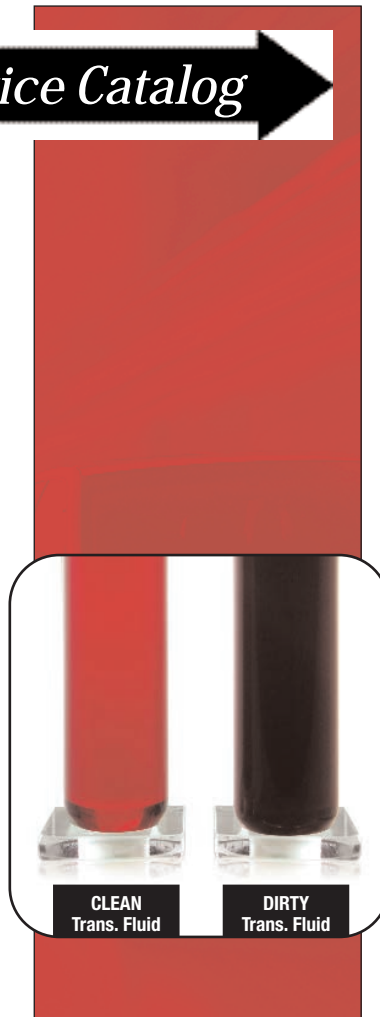

Your vehicle's automatic transmission can be one of the most expensive systems in your vehicle to repair.

The automatic transmission contains fluid that acts like a lubricant. This fluid carries away damaging heat and contaminants as it protects the automatic transmission from wear and possible failure.

As automatic transmission fluid performs its intended function, sludge and varnish naturally build-up in the automatic transmission. These contaminants loosen and travel through the transmission which can damage the transmission and lead to faulty operation and possible transmission failure.

A complete automatic transmission system service removes the old contaminated fluid from the automatic transmission system and replaces the contaminated fluid with clean, new fluid that contains antioxidants and conditioners that revitalize transmission seals, o-rings and prevent system failure.

Avoid costly and inconvenient repairs with a complete automatic transmission system service.

Dear Valued Customer,

Welcome to Camelback Subaru Service and Parts Department.

This guide is intended to provide you with a clear, concise schedule for maintaining your Subaru vehicle. Following these recommendations will ensure that your vehicle stays in optimum condition and that your ownership experience is a pleasurable one.

It is our goal to deliver quality care at its very best. We install only Genuine Subaru Parts using state-of-the-art equipment. We promise accurate diagnosis and repair. Our dedicated, highly-skilled Advisors and Technicians are committed to providing informed, accurate answers to your questions.

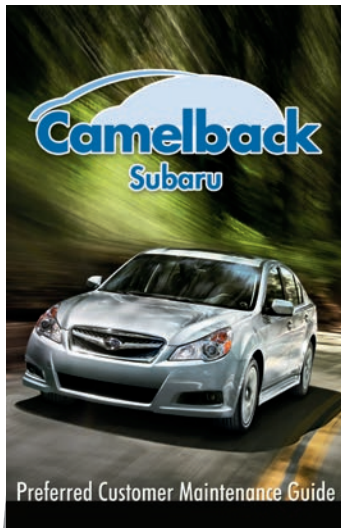

We want to achieve your complete satisfaction by providing the most convenient, efficient and pleasurable service you have ever experienced. It is our mission to make you a customer for life.

Thank you again for choosing Camelback Subaru. We look forward to meeting all of your Subaru ownership needs.

Respectfully,

*The Service and Parts Team
at Camelback Subaru*

Saturday - 8:00am - 4:00pm

Fluid Maintenance Service Catalog

Heating, Ventilation & Air Conditioning System Service

In addition, sterilizing the heating, ventilation, and air conditioning system in your vehicle with a complete heating, ventilation and air conditioning system service will eliminate most odors associated with pets, tobacco, foods and beverages.

Allergy spores, bacteria, mildew, mold, fungus, and pollen build-up over a period of time in vehicle air conditioning and ventilation systems. These micro-organisms can be trapped in the air conditioning evaporator by moisture that is created in the evaporator and in the evaporator fins. A dark, moist environment is the perfect environment for these microorganisms to grow. These micro-organisms create odors that travel into the vehicle interior as they pass through the vehicles heating and ventilation system.

Our complete Heating, Ventilation and Air Conditioning System Service will also check for any leaks in your vehicles air conditioning system. Leaks can be costly and can create an uncomfortable environment in your vehicle.

Your family deserves a clean, healthy and odor free environment.

We recommend replacement of your vehicles HEPA filter every 15,000 miles or 12 months, if applicable.

Fluid Maintenance Service Catalog

Fuel System Service

To prevent knocking, hesitation, stalling, and to improve gas mileage, power and emissions a complete fuel system service is recommended.

Carbon deposits, varnish build-up, corrosion and dirt build up in fuel injectors on the throttle plate and chamber, the combustion chamber, pistons, and valves. Build-ups like these restrict the flow of fuel and air to your engine. When fuel and air flow are restricted in your engine, performance is compromised.

A complete fuel system service will clean the vehicle injectors, throttle plate and chamber, combustion chamber, pistons, and valves and will allow better fuel and air flow in the engine.

Improve vehicle power, gas mileage, and over all performance with a complete fuel system service.

IMPROPERLY FUNCTIONING INJECTOR

PROPERLY FUNCTIONING INJECTOR

Fluid Maintenance Service Catalog

Brake System Service

For safe, factory performance braking and reliability a brake system fluid service is recommended as part of your normal vehicle maintenance schedule.

Brake fluid naturally attracts moisture. Moisture in the brake fluid may cause corrosion of the brake system and may cause brakes to fail.

A complete brake system service will exchange the old contaminated brake fluid from the vehicle with new brake fluid. The brake system fluid service will ensure brake fluid that meets vehicle manufacturer's specifications and that is moisture free and air free.

Brake system components can be expensive components to replace. Avoid expensive unwanted and unnecessary repairs and extend the life of your brake system with a complete brake system fluid service.

Fluid Maintenance Service Catalog

Differential System Service

The gear oil in your vehicles differential is a lubricant that protects metal and moving parts in the gearbox. As the gear oil performs its intended function in the differential, the oil breaks down and will become contaminated with sludge, varnish and metal debris.

Deteriorated gear oil and contaminates can effect gear shifting and result in system failure. Doing a fluid exchange on your vehicles differential will remove the contaminated gear oil, metal debris, sludge and varnish.

Fluid Maintenance Service Catalog

Engine Oil System Service

Traditional oil changes leave 20 to 30 percent of the oil in the vehicle. After a period of time these contaminants can affect engine performance, engine life, emissions, gas mileage and can lead to costly repairs.

A complete engine oil system fluid exchange service will dissolve and remove harmful sludge, varnish, and contaminants and replace the old fluid with new, clean fluid that meets vehicle manufacturer's specifications. A complete engine oil system fluid exchange is recommended every fourth oil change or every 20,000 miles.

Cabin Air Filter Service

To keep the air clean and healthy in your vehicle, we recommend replacement of the cabin air filter.

Dust, Pollen and debris from exhaust, fumes, soot, dirt roads, and leaves can enter into the interior of your vehicle. Replacement of your vehicle cabin air filter can protect you from debris that can blow through your vent system. Replacement of the cabin air filter can improve the fresh air mode of the vehicle to help defog and improve heating and air conditioning ventilation.

Your health and vehicle operation deserve a clean cabin air filter today!

Fluid Maintenance Service Catalog

Cooling System Service

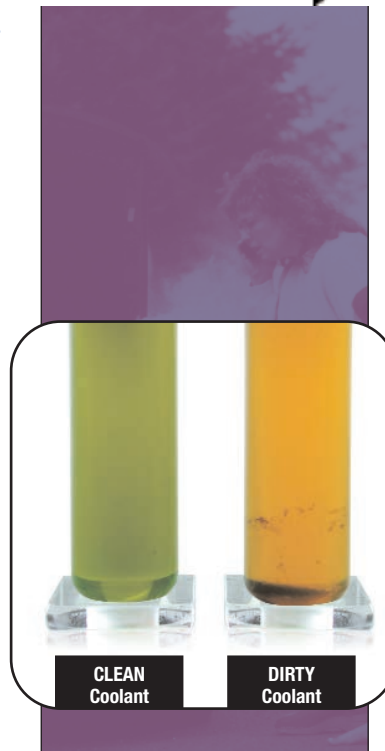

One of the leading causes of vehicle break down is cooling system failure.

The function of vehicle radiator coolant is to reduce the temperature in your vehicles engine. Coolant protects your vehicle from overheating and freezing. Coolant allows your vehicle to operate at high temperatures and low temperatures.

Over a period of time as operating temperatures fluctuate in your vehicles engine, coolant deteriorates forming harmful deposits. These deposits build-up in the vehicles radiator and eventually restrict the flow of coolant fluid through your vehicles engine, which leads to system failure.

A complete cooling system service will clean and remove harmful scale deposits and rust. The new coolant and conditioners used lubricate and help protect against rust and will extend the life of the new coolant. New, clean replacement coolant that meets vehicle manufacturer's specifications is then added to the vehicle.

Avoid challenging break downs and costly repairs with a complete cooling system service.
