## One Family, Three Generations, All Riders: One Mission

Arai is not a massive company run by rotating boards of directors with equally-rotating missions, all of which have one thing in common: greater profits at reduced costs. Fact is, we're pretty much the polar-opposite of them in about every way imaginable. Arai is a small family company, driven by the same family, with the same mission, through three generations — **three generations that have all been riders.**

This fact tends to make you look at things differently than big corporations do.

Like: Could you really build a helmet you wouldn't be willing to put on your own head, or the heads of your co-workers and friends?

Or: If your family's name — and your family's honour — are on the front of your helmet, how many corners would you cut? How many shortcuts would you take?

Or: **If cost is the most important element, how much is a head worth?**

That's why our one mission has always been the protection and comfort of riders. To the best of our ability.

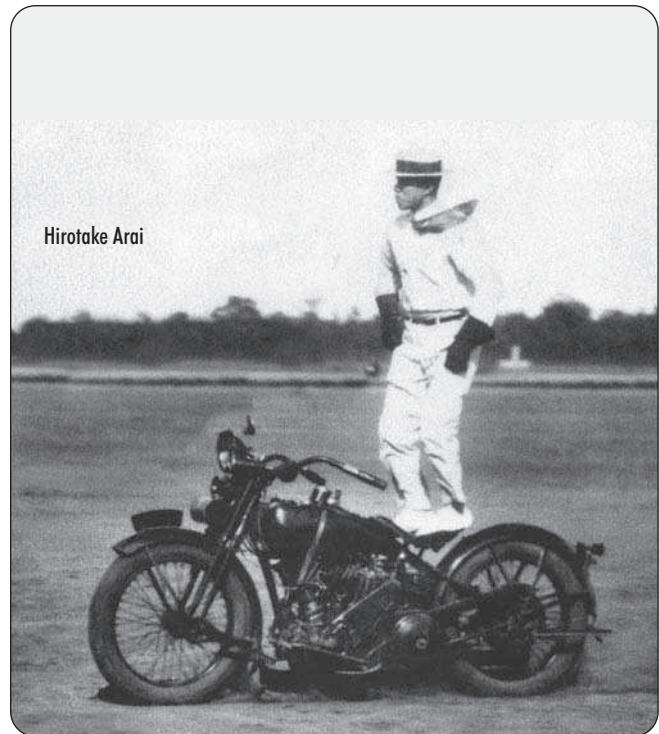

Period.

Akihito Arai

Michio Arai

Hirotake Arai

### Here Since the Beginning:

Back in the late 1920s and early 1930s when Arai founder Hirotake Arai began his passion with motorcycle riding, there were no motorcycle helmet companies in Japan. Eventually his passion for riding inspired him to design and build a helmet with his own hands. Not to sell, but to wear. He knew a little bit about how to make a good hat — he was a custom hat maker in an era when men wore hats all day. (Think Humphrey Bogart, Clark Gable, Mickey Spillane).

But Mr. Arai not only had to build his own helmet, he had to learn how to make a good helmet, to make sure his helmet could protect him the best way possible. After all, this was his helmet.

Two things happened as a result. One, in that small way Hirotake Arai pretty much created the motorcycle helmet industry in Japan. Two, he set the down the basic principle that would guide his future helmet company from that point on: Protection above all else.

And that basic principle, more than profit and money, has guided Arai ever since.

## Emphasizing helmet protection above all else.

### The Arai Difference:

#### Our Basic Principle: Protection above all else

Since the day we were founded three generations ago, the same basic principle has driven us: **Protection above all.** Proper protection devoted to helping you, the rider, in that unpredictable, unforgiving world out there.

And no helmet fad or fashion has ever changed that principle.

**Test standards are a good thing. They provide a base by which all manufacturers must comply. However, Arai believes that simply passing the lab tests is not enough. We must consider more than just the required lab test – we must consider the outside world.**

### Protection Above All Means Comprehensive Energy Management

To Arai, our guiding principle of “Protection Above All” is simple common sense. A helmet must be able to deal with a wide range of issues during an impact on the street or race track. Such potential must be considered when designing and producing a helmet. Protection is king. Not features or gimmicks or colors or style. You can change or improve whatever you want — as long as you never affect job one: protection.

Arai's idea of protection is different than some others in the industry. To us it means comprehensive energy management: attempting to deal with the dynamics of an impact on the street or race track where nothing is controlled — in addition to those specified by the standards in the test lab. The world is not a test lab, so we try to think about how impacts occur in the outside world.

Michio Arai was raised in this environment of comprehensive energy management by his father. It's the same concept he's passing down. **Our commitment to this concept is unique to Arai. It's what our customers expect. It's what they get.**

## WHAT ARAI'S "PROTECTION ABOVE ALL ELSE" MEANS TO YOU: Two Examples

**We don't think about what we have to do — we think about what we should do for the riders who put their trust in Arai.**

That means that the features and benefits we offer come from a different mindset:

Something as simple as our faceshield **brow vents**. They exist because Arai won't punch vent holes in the helmet shell's critical forehead area (even though the safety standards don't test there). Could we? Of course we could. But Arai looks at things differently. Instead of adding extra holes in the shell, Arai uses the already-existing eye port to provide exceptional ventilation while at the same time maintaining a strong shell. It was not easier or cheaper to do it this way — but it is better. It makes for a better helmet. It makes for a better Arai.

Arai chooses to design and build shells with the same consideration to potential impacts to areas that are outside of the impact testing areas. Arai **reinforces the lower perimeter of the shell** to not only improve shell strength, but to also maintain a lower center of gravity, resulting in less rider fatigue and more neck and shoulder comfort. Some others may look at this as an opportunity to save weight and cost, but we don't think skimping on shell material outside of the designated test area is a good way to try to save a few pennies.

#### The ARAI worker: empowered, enthusiastic, dedicated

**Michio Arai: “What our people make here is an expression of themselves, not a product, it's more than that. Arai is more of a studio than a factory.”**

Each and every Arai helmet is a work of handmade craftsmanship by Arai artisans, not of the cheapest assembly-line hourly wage. (That's one reason an Arai costs more than assembly-line helmets.)

Their pride is obvious in their faces. The care, the concentration. They know that an Arai is not just a helmet, but a tradition. They know their work matters.

**Every single** Arai helmet shell is officially inspected **two** times during production. Not just a few random samples, every single shell. Every single shell matters because every single customer matters.

“And we ride. So we're not just Arai workers, we're Arai customers, too.”

**The main ingredient in every Arai helmet isn't fiberglass or carbon or EPS. It's passion.**

**ARAI HELMETS:**  
There is a difference  
What drives us is you.

## At Arai, there is a very big difference in our comfort and fit because we put so much more emphasis on our comfort and fit.

Arai is the only company offering multiple interior-fit shapes to better address the infinite variety of riders' head shapes and sizes.

No one pays more attention to the subtle variations and infinite possibilities of the human head shape than Arai. Why? Because it's the secret to getting the best comfort and fit. And Arai is nothing short of obsessed with putting you into the best fitting, most comfortable helmet possible – because that's who we are.

**The Importance of a Helmet's Interior Shape: Because head shape is as important as head size in getting "the perfect fit."**

### Step One: Finding the Right Size and Fit

The first step is understanding how a helmet is supposed to fit, that it's not like your favorite baseball cap. A helmet is an **ENERGY MANAGEMENT SYSTEM** whose number-one job is to manage the energy of an impact it can't predict. (Pretty paint and graphics are just there to make it look good.)

**Start:** Get your head measured to get an idea of where to start. The images here show the proper placement of a measuring tape to get the right tape-placement for the most accurate measurement.

**Your Face:** Do not be concerned at first with getting the helmet to fit over your face. (Facial fit problems mostly occur in riders with thicker cheeks or jaws. We find many such riders wearing helmets up to three sizes too big. The problem occurs when you can't get the helmet past your cheeks or jaws, you think "it's too small," and you reach for a bigger size. But your brain's not in your face.) The helmet must fit your head. That's why it's important to focus on your head size (crown fit) measurement first. How? With Arai's cheekpads.

### Proper Crown Fit and Cheekpads

**Snug is good:** For the most comfort, the interior must fit snugly all around the crown of your head. (The crown is the area contacted by a baseball cap's band, for example.) You should feel a firm, even pressure at all the contact points around the interior perimeter, with no tight pressure points that could become uncomfortable in the future.

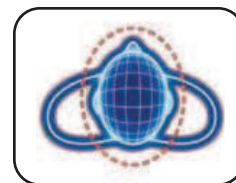

Try on different sizes and interior fit shapes until you get the desired crown fit. (If you have that broad facial-structure situation, remove the cheekpads first to keep them from interfering with getting the helmet on. Then try on helmet sizes until you get the proper crown fit.) Once the crown fit is good, Arai's optional cheekpad thicknesses — and our exclusive new 5 mm peel-away micro-fit cheekpad layers — can fine tune your personal fit to a degree you never thought possible. Just about the closest you can come to wearing a helmet custom fit for your individual face — as only Arai can do it.

**Don't guess size:** Try the helmet on for a while before you buy it. Don't think you know your shape or size — make sure. Measuring gets you halfway there; a test fit confirms it. Having a helmet of the same brand, model, and size — even an Arai — may not fit like a current model or size because the evolution of the design process can affect the current size and shape.

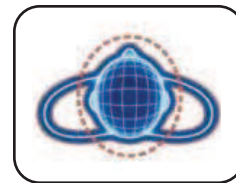

### Determining Your Arai Interior-Shape Fit

Generally, our North American market interiors have an oval shape orientation (somewhat longer front-to-back, narrower side to side) because most of our heads tend to be more oblong than round. Our different Arai models vary slightly based on that general Oval shape to accommodate a much wider fit range.

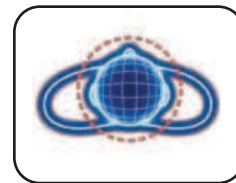

**LONGER OVAL** (Longer front-to-back, more narrow side-to-side). This fit offers additional forehead room for those who find that most helmets have pressure points in the forehead.

**INTERMEDIATE OVAL** (Not as long front-to-back as the Longer Oval). This fit shape lies in the middle area between heads than the more pronounced Longer Ovals or more evenly-shaped Rounder Ovals.

**ROUNDER OVAL** (Even a little shorter front-to-back and a little wider side-to-side). Although still an oval, this shape is for riders whose head shape tends to be a bit rounder than that of a strict Intermediate Oval fit.

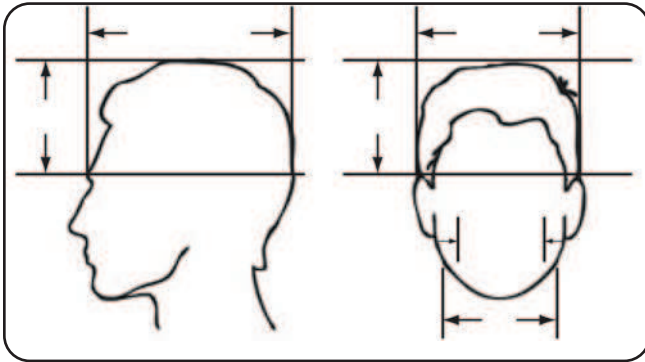

**Remember, Arai makes different shape interiors, but which one is best for you depends on which one fits you the best. The only way to determine that is to try them all on.**

Lastly, we want to mention the role of Measured fit, even though head shape is equally (if not more) important to the best fit. You'll find an excellent video on getting the right fit on our website at [www.araiamericas.com/default.aspx?pageid=92](http://www.araiamericas.com/default.aspx?pageid=92).

## Helmet Fit: How Hard Can It Be

If helmet companies made helmets individually for every rider, fit would be much less of a problem. They take the measurements for each face and that's it. Perfect. The problem is that helmet manufacturers are making helmets to fit a world of people — literally. A world of shapes, angles, widths, bulges, recesses, etc. (Snowflakes aren't the only things where no two are alike.)

**The difference in how helmets are made to fit the world of people is what separates Arai from every other manufacturer.**

Helmet making is mostly a function of economics. (Isn't everything?) If you're a lower-end manufacturer some things just aren't economically feasible — like dealing with all those headshape variables. So you cut costs by making just one interior shape for all your models. It doesn't do much for the comfort and fit of the world of head shapes, but you're selling a lower-priced product, so it's good enough.

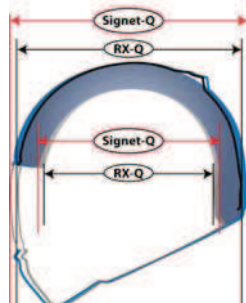

**Several decades ago Arai realized that the idea of good enough wasn't what drove us.**

Arai believed there are discerning enthusiasts with the riding experience and awareness to appreciate the innumerable benefits of a better-made, better-fitting helmet for long stretches in the saddle. (Arai riders typically ride further than from road house to road house.) And while it was accepted that we could never build the perfect fitting helmet for everyone, that didn't mean we couldn't try. No matter how time and effort-intensive, and costly, it was. We had a mission. So for more than three decades, Arai has pioneered different shapes — and even different proportions within those shapes — in our various helmet models, working to offer a better fit for more people.

### A Case in Point: The Arai RX-Q and new Signet-Q models

While over the years we've had many different shapes, and various proportions within those shapes, we constantly measure heads to learn where we can improve. A longstanding successful shape has been the Intermediate Oval (I/O), currently found in our RX-Q model.

We recently measured the head shapes of nearly 750 consumers across the U.S.! It provided us with the firsthand information that led to the development of our latest Long Oval (L/O) helmet, the Signet-Q.

We say the latest Long Oval because we don't simply mimic the past, we blend what worked before with what we've learned since, to produce a new shape to hopefully fit more people. We used the Signet model name, which was used years ago and was well known for its very long narrow interior shape, but updated the shape and fit to make sure that this new Signet comes with a new L/O shape that we feel addresses a larger segment of the US market. Because we have more than one interior shape/fit, riders often ask us to define those shapes and proportions so that they can more easily determine the best helmet for them. And while we have to define these parameters in order to produce our helmets, we don't provide those details because the decision isn't based solely on dimensions.

**A helmet needs to be tried on in order to determine a proper fit.** With an Arai helmet, regardless of your presumed head shape, a side-by-side test fit, like an RX-Q against a Signet-Q, will give an apples-to-apples comparison to find your best fit. And, not surprisingly, in some cases your "perfect" fit isn't the interior shape you thought, or were told you were.

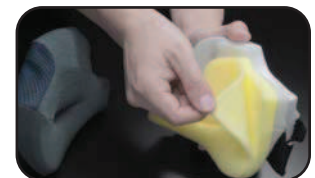

## Arai's Latest "Perfect Fit" Innovation: Micro-Fitting Cheek And Side/Temple Pads

Even after laboring over different shapes and dimensions, we recognize there is still an infinite number of shapes that fall between our sizes and interior fits. So Arai takes fitting to an even greater level by incorporating micro-fit pads that allow you to give yourself a little extra room if needed, without having to purchase extra interior options. This allows you to stay in your proper size rather than the traditional solution of moving up a size, which decreases comfort and performance while increasing noise and movement.

Nothing takes the place of an in-person test fit of the actual helmet you're going to buy. You owe it to yourself to make an educated decision, to try on every helmet, not just an Arai, and then make the best decision for you.

Currently our two main fit packages — RX-Q (I/O) and Signet-Q (L/O) — provide suitably different and unique solutions for the extremes of head shapes, while offering new micro-fitting options to help a few more of the extremes and in-betweens find a better fit.

We constantly encourage Arai dealers to stock a size selection of all Arai models to provide a direct comparison opportunity for their customers. As a consumer, we encourage you to seek out one of those dealers and/or encourage your dealer to make the effort.

## Brow-Vent Channeling

Brow-vent inner ducts redirect incoming air to the temples instead of the forehead, and around the ear area (missed by many helmet ventilation systems). The stale air is then extracted out the side exhaust cowls. The airflow over the temple artery reportedly also helps cool the blood flow to the brain area. This simple re-purposing of two existing vent features greatly improves helmet performance and rider comfort.

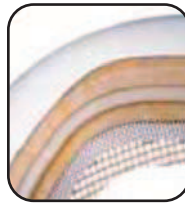

## Patented Dual-Pivot Chinvent

This easy-to-operate, two-position dual-pivot hinge mechanism allows for increased chinvent airflow capacity to two areas: the first position directs air to the face through an activated carbon-coated foam filter; the second sends the air to the faceshield to aid de-fogging.

## Shell Construction

Arai's decades of experience, research, testing, comparison and evaluation has concluded that fiberglass-based construction is ideal for performing a helmet shell's main job – dispersing impact energy over the widest area through strength, structural integrity and impact flexibility (although Arai's R&D study and testing of alternative shell technologies is always ongoing). The shell utilizes our proprietary aerospace fiberglass to achieve an exceptionally strong, flexible, yet lightweight shell.

## FCS Cheekpad System

Arai's peel-away FCS cheekpad design delivers comfort, support and it features our 5 mm peel-away custom-fit layer and Emergency Release System.

## More Aerodynamic Upper and Side Exhaust Vent Cowling

Sculpted to enhance stability while increasing exhaust efficiency, the side vent cowls are tailored to the needs and speeds of the street.

## Removable, Washable Liner

Another Arai innovation first introduced in the late '80s, our fully removable, washable, and replaceable interior comfort-liner components also permit micro-fitting of a helmet in between-size scenarios.

## One-Piece Liner

Arai's EPS liner is like no other, comprised of several material densities molded into a single piece. Arai pioneered this technology more than 20 years ago and still gives its unique benefit: the direct-fused contact area that each EPS cell shares with its neighboring cells creates a mutual support. As one is crushed under impact, the surrounding cells assist with the energy absorption. (Liner pieces that are simply fitted or glued together cannot rely on such a high-level support bond.)

## LRS Shield Removal

Watch racers Nicky Hayden and Kenny Roberts, Jr. swap Arai faceshields on video while wearing their helmets and you'll see for yourself how easy Arai's LRS tool-less system really is. We continue to use side pods when others have gone to easier-to-make pod-less systems.

## Optional Interior Liners and Cheekpads

Optional interior liners and cheekpads of different thicknesses allow you to custom fit your Arai helmet. To order a liner of a different thickness, start with the Lining Code that matches your helmet size, then specify the desired thickness. For example, an optional 5mm liner for a large helmet would be specified as a "III-5mm" liner.

\*HCM (Head Circumference Measurement) should be a starting point only in determining your helmet size. Determining the best possible fit should be from actual test fittings of Arai's various interior fit packages. Changes and updates can affect the standard pad-thickness supplied with your helmet.

## Features & Benefits

	CORSAIR-V	RX-Q	SIGNET-Q	VECTOR-2	CT-Z	XC	XD4	VX-PRO <sup>3</sup>
<b>PB-SNC® (Peripheral Belting-Structural Net Composite)</b> Originally devised for Arai's Formula-1 helmets, the Peripheral Belt extends across the forehead area of the shell above the eye opening, enhancing the structural integrity while maintaining flexibility, low weight and shell size. Now incorporated into Arai's newest and most advanced shell construction: SNC®. Using special proprietary net strands that bond shell layers even more rigidly, SNC lets us reduce shell weight by almost three ounces while providing a lower center of gravity, resulting in better balance and reduced rider fatigue.	■							
<b>ScLc (Super Complex Laminate Construction)</b> 40% stronger than standard fiberglass in extension and bending resistance. Commonly referred to as F.A.S.T. (Fiberglass Aerospace Shell Technology) construction, due to its development heritage.		■	■		■			
<b>clc (Complex Laminate Construction)</b> Contains a specially designed felt that is sandwiched between the two layers of Super Fiber Laminate. The felt acts as a reinforcement layer without adding significantly to the weight of the helmet.				■			■	■
<b>Pull Down Airflow Spoilers</b> Helps minimize wind noise. Also aids with the extraction of hot air from the face area.	■	■	■				■	
<b>Extreme Peripheral View</b> 10mm wider eyeport (5mm each side) greatly enhancing peripheral vision.	■	■	■	■				
<b>Patented New AirWing®</b> Adjustable from track to road conditions. Designed to reduce drag, turbulence and buffeting.	■							
<b>Cowl Vent Design</b> exhausts heat more efficiently. Now "sculpted" into the rear-shell shape, they've been shown to work in concert with the AirWing® to greatly add lateral helmet stability at speed (Arai test riders reported this benefit is most noticeable when popping up into the airflow when braking).	■	■	■		■	■	■	■
<b>Hyper-Ridge</b> The reinforcement band circles the bottom of the shell adding strength and lowering the helmet's center of gravity.					■	■		■
<b>Outward Flaring Hyper-Ridge</b> Flares out to provide a larger opening so that the helmet is easier to get on and off. The reinforcement band circles the bottom of the shell adding strength and lowering the helmet's center of gravity.	■	■	■	■				
<b>LRS Shield Removal</b> allows for shield changing without tools or removal of the sidepods.	■	■	■	■	■	■		
<b>De-Mist Lock</b> faceshield tab pushes forward to open the shield and help clear any fog that may appear.	■	■	■	■				
<b>Removable/Replaceable Cheek Pads</b> gives you a more custom fit by enabling you replace standard pads with optional sizes.	■	■	■	■	■	■	■	■
<b>5mm Peel Away Cheek Pad</b> allows customer to step down a size without purchasing an optional cheekpad set.	■	■	■	■	■		■	■
<b>Emergency Release Cheek Pads</b> allows easier access to an injured rider by sliding out via integrated pull tabs built into the underside of the cheek pad.	■	■	■				■	■
<b>FCS</b> Arai's new peel-away FCS™ cheekpad design is like nothing you've ever felt. And it features our exclusive 5 mm peel-away custom-fit layer.	■	■	■		■	■	■	
<b>Sound Absorbing Ear Pad Foam</b> Layer of foam in ear pocket to help block assorted noises from reaching your ears.	■	■	■		■			
<b>Advanced Dry-Cool Liner</b> uses micro water cells to improve moisture and heat transfer from the head to the airflow, so your head is cooler and dryer after a long ride.	■	■	■		■	■	■	■
<b>Removable/Washable Interior</b> allows for the liner to be removed for easy washing. The liner can also be changed to fit those in between sizes.	■	■	■	■	■		■	■
<b>Non-removable/Washable Interior</b> can be easily cleaned.						■		
<b>Brow Vent Channeling Ventilation</b> gives you more cooling air in the forehead area without holes in the critical forehead area of the shell or impact absorbing liner.	■	■	■		■		■	
<b>Dual Intake/Dual Exhaust Ventilation</b> provides a more directed airflow and exhaust vents are designed to draw a significant volume of air from the helmet's interior.		■	■			■		
<b>FFS (Free Flow System)</b> helps reduce wind noise and turbulence while increasing the exhaust of hot air.	■	■	■	■				
<b>Rear Neck Exhaust Duct</b> is a perforated duct at the base of the lining which removes stale air from the helmet interior.	■	■	■	■	■	■	■	■
<b>Chin Vent Shutter</b> is a closable gate behind the center vent that allows the vent to be closed for extreme weather condition.							■	■
<b>Rear Exhaust Channel and Vent</b> adds a racy look while drawing more hot air from the helmet interior.				■				
<b>Rear Exhaust Channel and Vent</b> adds a racy look while drawing more hot air from the helmet interior.								
<b>Delta Duct Toggle Control Ventilation</b> Additional quick open/close upper ventilation, either intake or exhaust.	■					■		■
<b>DF-M Top Mounted Diffuser Vents</b> Medium sized diffusers that can easily be removed or replaced due to damage as a result of harsh offroad environments.							■	■
<b>DF Diffuser</b> has enhanced air inlets to increase airflow efficiency. The middle-intake slot creates an accelerated venturi effect for faster venting of stale air. The center Top Vent has been re-sculpted to provide more air intake; it also has a larger toggle.	■				■			
<b>DDL-4</b> with a bridged design, the DDL-4 provides outstanding ventilation and aerodynamic stability on the street.		■	■			■		
<b>Removable/Replaceable Vented Neckroll</b> Easily removes and re-installs for thorough washing or replacement if damaged. Also has an additional exhaust port.	■	■	■

## CORSAIR-V RC (Racing Carbon)

So rare, so special, that if you want one, you have to place a factory order and wait for it!!

**SPECIAL ORDER ONLY –  
No discounts or extended  
terms (no booking) -  
No Backing Out –  
\$1000 Deposit Required**

INTERMEDIATE OVAL

### Intermediate-Round Oval Shape

The Corsair-V RC has Arai's Intermediate Oval (IO) interior fit shape, but one nearer the rounder end of the range.

### Carbon Fiber from Arai's Formula-1 Racing

There are several carbon fiber motorcycle helmets out there. But none like this one. Based on Arai's F1 GP helmets' GP-

Sebastian Vettel, 2011 F-1 World Champion

6RC technology, it uses the same CF found on the newest generation of commercial airliners, combined with Arai's own resin plus Zylon reinforcement. So complex, it takes an extremely-skilled Arai shell craftsman an entire day to make just one shell.

### Arai's Peripherally-Belted Carbon Fiber Snc Shell Construction

The extremely-stiff and light carbon fiber outer shell, reinforced with Arai's exclusive Peripheral Belt (extending across the

shell's forehead area above the eyepoint opening to enhance structural integrity while maintaining flexibility and low weight).

### Diffuser Ventilation

The DF-10 offers enhanced air inlets to greatly increase airflow efficiency. A middle-intake slot creates more negative pressure "pull" for even faster venting of stale air. Larger upper vent toggles work with thick gloves, and the center Top Vent is re-sculpted for more air intake.

### Patented AirWing®

Arai's patented, adjustable AirWing® is designed to greatly reduce drag, turbulence and buffeting. It provides unprecedented aerodynamic performance options via five hand-adjustable "attack angle" positions from full-tuck racing to upright position.

### Extreme Peripheral View

The Corsair-V RC's faceshield has a 10mm-wider Opening (5mm per side) to enhance peripheral vision, delivering

a tremendous advantage to both riders on the track and on the street. The wider opening uses Arai's SAI series faceshield that fits flush to the shell, improving aerodynamics and reducing wind noise.

## ARAI • CORSAIR-V RC Racing Carbon Ultralight GP Helmet

	XS	S	M	L	XL	(G) Price
Racing Carbon	09-0003	09-0004	09-0005	09-0006	09-0007	3,999.99

## CORSAIR-V

The state of the art in motorcycle helmet design as only Arai can achieve it.

INTERMEDIATE-ROUND OVAL

*Reserved for those riders with no reservations about wanting the best, the absolute state of the art as only Arai can do it.*

### FCS Cheekpad Design (Patent-Pending) & Exclusive 5mm Peel-Away Layer

FCS uses an innovative and exclusive spring support built into the cheekpad to add just the right amount of pressure when needed while being worn, but then easily moves out of the way for easier helmet on-off. The cheekpads feature a 5mm peel-away layer for added room if you need it, giving you even more ability to craft the perfect fit and comfort for your face.

### Patented AirWing® & DF-10 Diffuser

Arai's exclusive, adjustable Air Wing® is designed to reduce drag, turbulence and buffeting. It provides unprecedented aerodynamic performance options via five hand-adjustable "attack angle" positions from full-tuck racing to upright everyday street riding. The DF-10 offers enhanced air inlets to increase airflow efficiency even better than its predecessor. A middle intake slot creates more negative pressure "pull" for even faster venting of stale air. Larger upper vent toggles work with thick gloves, and the center top vent is re-sculpted for more air intake.

### Peripheral Belting & Structural Net Composite

Created for Arai's Formula-1 helmets, the belt extends across the shell's forehead area above the eyepoint opening, enhancing the structural integrity while maintaining flexibility and low weight. It's incorporated into Arai's advanced SNC (Structural Net

Composite) shell construction, that uses proprietary net strands that work like rebar to bond shell layers more securely for even better shell integrity.

### Side-Vent Exhaust Ports

The sculpted exhaust ports, designed to clear interior air and heat more efficiently.

### Latest-Generation Dry-Cool® Vented Neck Roll

The fully removable liner, utilizing Arai's third generation Dry-Cool® material, transfers heat and moisture away from the rider quickly and efficiently. The neck roll is not only removable and replaceable; it

adds yet another stale-interior-air exhaust outlet through channels in the EPS liner, not to mention making complete helmet cleaning a breeze and, in the case of damage, a snap to replace.

### Emergency Cheekpad Release System

This now-copied ground-breaking safety innovation was specifically developed to allow easier access to an injured rider by sliding out, making helmet removal easier for trained medical personnel.

## SIGNET-Q

The result of Arai's long history of understanding the complexity of the relationship between head size and head shape combined with the “melting pot” effect which is most pronounced in the North American markets.

LONG OVAL

### The Fit You've Been Missing

The Signet-Q's longer shell and interior shape are specifically designed for riders whose helmets can cause a painful forehead “hotspot” due to an interior shape that isn't made to fit your longish head. This illustration shows the interior-shape difference between the Signet-Q and its Q-series stable mate, the RX-Q.

### FCS® (Facial Contour Support) cheek pad design

Arai's peel-away FCS™ cheekpad design delivers comfort, support and

it features our exclusive 5 mm peel-away custom-fit layer and Emergency Release System.

### 5mm Peel-away Side Temple Pads

Arai's exclusive peelaway side/temple crown pads give you the option of 5 mm more interior width if needed. Yet another level of fit customization no other helmet brand offers.

### Pinlock Max Vision® Faceshield

Exclusive Pinlock 100% Max Vision® faceshield included.

The “longer” SIGNET-Q takes comfort and fit to new lengths

### Brow Vent Channeling Ventilation

directs more cooling air to the forehead area without the need to punch holes in the critical forehead area of the shell or impact-energy-absorbing EPS liner.

### More Aerodynamic Upper and Side Exhaust Vent Cowling

Sculpted to enhance stability while increasing exhaust efficiency, the side vent cowls are tailored to the needs and speeds of the street.

### Removable/washable Liner and Neck Roll

The neck roll is not only removable and replaceable; it adds yet another stale-interior-air exhaust outlet through channels in the EPS liner — not to mention making complete helmet cleaning a breeze and, in the case of damage, a snap to replace.

## RX-Q

INTERMEDIATE-ROUND OVAL

A new benchmark in street helmet design: purpose-built to be the ultimate street helmet. Every aspect of its exceptional performance is optimized for the conditions, speeds and environment of the real world. A helmet for others' top-of-the-line helmet to envy.

Purpose-built to be the "Ultimate Street Helmet".

### Brow Vent Channeling

The faceshield Brow Vents, like those of the Corsair-5 redirect incoming air to the temples instead of the forehead, and around the ear area. The stale air is then extracted out the side exhaust cowls. The airflow over the temple artery reportedly also helps cool

the blood flow to the brain area. This simple re-purposing of two existing vent features greatly improves helmet performance and rider comfort.

### Exclusive 5mm Peel-Away Cheekpad Layer & Emergency Cheekpad Release System

Giving you even more ability to craft the perfect fit and comfort for your face, the cheekpads now feature a 5mm peel-away layer for

added room if needed. These are part of Arai's now-copied, groundbreaking Emergency Release-System safety innovation specifically developed to allow easier access to an injured rider by sliding out easily, making helmet removal easier for trained medical personnel.

**More aerodynamic upper and side exhaust vent cowling**, sculpted to enhance stability while increasing exhaust efficiency. The side vent cowls are tailored to the needs and speeds of the street.

### Removable/ Washable Liner and Neck Roll

The neck roll is not only removable and replaceable; it adds yet another stale interior-air exhaust outlet through channels in the EPS liner.

# DEFIANT

INTERMEDIATE-ROUND OVAL

Although much more aggressive on the outside, as compared to its siblings, the new DEFIANT contains all the internal attributes that set every Arai apart from the crowd.

### Ventilation and aerodynamics

The new IC-4 upper front intake vents have a slide-gate closure that seals completely, allowing for a cleaner airflow while closed.

The new ACR-4 flow thru exhaust vent allows airflow to pass over and through, accelerating exhaust flow from helmet interior when open, and reducing drag when closed.

### Brow vent ducting

Redirects air flow across the temples, cooling the temporal arteries leading to the brain, then passes the ear pockets, drawing away more excess heat, and exits out the side cowls.

**Fully removable/replaceable/washable Interior:** Comfort head liner, Cheek pads, Chinstrap covers & neck roll pad.

This new material provides a luxurious feel for better comfort.

**Pull-Down spoiler** enhances the exhaust flow when exhaling, while also streamlining.

Used in conjunction with the new flared bottom edge trim, the Defiant proves to be extremely stable at speed and is quieter too.

New **IR front spoiler edge trim** creates a stabilizing down force, reducing buffeting, lifting and wind noise.

The added benefit of **5mm peel-away temple pads** adds another level of customization, giving the helmet interior a little extra width when needed.

New **FCS® (Facial Contour Support)** cheek pad design. Innovative and exclusive spring support adds just the right amount of pressure when needed while being worn, but seamlessly “gets out of the way” when putting on and taking the helmet off.

This design, combined with the 5mm peel-away micro fit layer, amplifies Arai’s attention to all aspect of fit.

An added bonus of the new **FCS® pads** is the effect it has on lowering interior noise levels by blocking wind noise from entering the bottom of the helmet.

New **IR Neck Roll** pad has an improved shape to flow more air to the bottom of the helmet at lower speeds for improved rider comfort.

New **IR chin vent** offers more than simply an aggressive new look, it provides multiple functions.

Position-1 allows air to flow through the top port and up the inner surface of the shield for de-fogging.

Position-2 allows air to flow through the bottom four ports to the mouth.

New design also allows for easy vent replacement.

# VECTOR-2

INTERMEDIATE-ROUND OVAL

Arai's "basic" helmet is anything but. We call it Less is More, but like everything from Arai, our emphasis is on More. Everything you want, Nothing you don't. The Vector-2 is specifically created for riders who don't need all the bells and whistles, but who can't imagine not getting the Arai handmade magic in craftsmanship, protection, performance, comfort and fit. (The fact that it costs a little less doesn't hurt either.)

Arai's "basic" helmet is anything but.

### Tuned Rear Vent/Wing

ACR-2 rear exhaust vent-wing combo: Wind-tunnel tuned air inlets markedly improve ventilation performance and helmet stability at speed.

### Unique Patented Chinvent Design

The Vector-2 has a chinvent design that is unique to it alone. Functionally, its two-position detent adjustment allows incoming air to be directed to either the facial area for cooling, or onto the shield to help clearing if needed.

### Hyper-Ridge band

This newly-sculpted lower reinforcement band provides stability and a lower center of gravity for a very lightweight feeling. Large side exhaust ports increase airflow while minimizing noise levels. And the larger bottom opening makes for easier on-off.

### Top Vent

The new ACF-2 front intake vent incorporates a sliding door that closes the oversized intake opening completely. At the same time the outer gate closes the intake opening, an inner plate slides over and closes the hole in the shell. The ACF-2 is now available as an accessory part.

### 5mm Peel-away Temple Pad Layer

The Vector-2 also adds the new 5mm peel-away layer to the removable interior comfort liner's temple pad, giving you another level of customization no other helmet brand offers.

### 5mm Peel-away Cheekpad Layer

Giving you even more ability to craft the perfect fit and comfort for your face, the cheekpads now feature a 5mm peel-away fluorescent yellow layer for added room if needed.

# CT-Z

INTERMEDIATE-ROUND OVAL

Arai takes cruiser/touring helmet comfort and design to a whole new place. A place you'll really want to visit, and never want to leave. The CT-Z replaces the XC-RAM model.

**New Cruising/Touring Helmet!**

### Dual Pivot Shield

The Dual Pivot shield mechanism allows the shield to rotate up and back so it tucks neatly under the peak. This allows for a very low peak profile, reducing drag or bucketing at higher street-legal speeds.

### Upper Vent System With Airwing

Diffuser ventilation technology from our Corsair-V race helmet gives you superb airflow and hot air extraction. The fixed AirWing reduces lift and increases aerodynamic stability at highway speeds.

### Adjustable Peak

The peak shields your eyes from the harsh sun glare from those long rides into the sun. And because Arai sweats even the

tiniest details to make your ride better, there's also a matte-black band under the peak's leading edge to further reduce glare.

Aluminum Silver

### Fully Removable Dry Cool Liner

Arai's Dry Cool Liner has removable 5mm peel-away surface pads on both sides of the headliner and in the FCS cheek pads to allow you to achieve a close, custom micro-fit for your head and facial shape.

### FCS Cheekpad Design

Arai's new FCS (Facial Contour System) Cheek Pad design gives more support over a larger area. It actually wraps under the jaw for extraordinary comfort and stability with minimal pressure.

### Vented Neck Roll

Takes advantage of existing airflow from around the rider's neck to further enhance helmet ventilation by extracting more heat build-up from the interior.

# XC

XC Series redefines open-face helmet design and function.

INTERMEDIATE-ROUND OVAL

**Gives you more facial coverage without sacrificing traditional open-face helmet feel.**

### TDF-3 Front Vent

Working with the DDL-4 exhaust vents, the TDF-3 front vent is new and designed to further improve intake airflow to the XC's interior.

### Side Cowl Exhausts

Completing the XC's advanced ventilation package, these exhaust vents further help in quick removal of stale interior air.

### Thinner Faceshield Side Pods

The thinner side pods on the XC series give the helmets a sleeker, more aerodynamic shape that integrates better with the shell design for less air resistance.

White

### DDL-4 Ventilation

Directly from Arai's RX-Q model, the XC's DDL-4 exhaust vents are designed to maximize airflow at real-world street speeds.

### Unique Cheekpad Design

Adding to its distinctive look, the XC's cheekpad design is similar to that of a full-face helmet, with its full-coverage EPS base and removable covers.

**Vented neck roll** uses the prevailing airflow under the rider's neck to further enhance ventilation by extracting more interior heat and stale air.

### Organic Shell Shape

Follows the smooth, linear naturally reinforcing shape of the egg — one of nature's strongest shapes. The shape "flows" better in the wind, conforming more to the head's natural shape — smaller and less bulbous — and seals better to further reduce wind noise.

## XD<sup>4</sup>

Arai did the only thing possible to this groundbreaking, critically-acclaimed street-and-dirt crossover helmet – We made it even better.

INTERMEDIATE-ROUND OVAL

### New Exhaust Ports & Shell Shape

These new top-diffuser-vent ports nearly double the XD<sup>4</sup>'s airflow, while its new shell shape provides better aerodynamic stability at higher street speeds in concert with its highflow peak and new side cowl vents.

### New Larger Side Cowl Vents

The new larger, sculpted vents improve ventilation efficiency as well as helmet stability on your head at speed.

### Chinvent

The new vent has more intake ports for improved airflow.

### FCS Cheekpad System

Arai's patent-pending FCS™ (Facial Contour Support) cheekpad design delivers comfort, support and fit like nothing you've ever felt, and it features our exclusive 5 mm peel-away custom-fit layer.

### 5mm Peel-Away Side-Temple Pad

Arai's exclusive peel-away side/temple crown pads give you the option of 5 mm more interior width if needed. Yet another level of fit customization no other helmet brand offers.

### Brow Vent Faceshield

Arai has added our trademark Brow Vents to the new XD<sup>4</sup> faceshield, providing airflow to the temple area of the head.

**WARNING:** Do not install this shield on any earlier XD model.

### Fully Removable/ Replaceable/ Washable Interior

Arai's patented Dry-Cool® technology keeps you drier and cooler (hence the name) for greater long-haul comfort.

### Emergency Cheek-Pad Release System

Developed to allow easier access to an injured rider, the XD<sup>4</sup>'s cheekpads slide out easily — via the integrated pull-tabs built into the underside of the cheekpad — making helmet removal much easier for trained medical personnel.

## Go Configure!

The XD<sup>4</sup> offers three distinct configurations depending on rider preference or riding conditions. Change the look every time you ride, or even during the same ride.

**NOTE:** The visor/peak supplied with the XD<sup>4</sup> helmet is not suitable for high-speed use. At such speeds air catching a side or main surface of the peak may cause difficulty in returning the head to a forward and/or level position. To understand and prepare for this possible effect, you should first try to experience it at low speeds, gradually increasing speed so that you will know what to expect and determine when the peak should be removed for higher-speed riding.

**NOTE:** The visor/peak supplied with the XD4 helmet is not suitable for high-speed use. At such speeds air catching a side or main surface of the peak may cause difficulty in returning the head to a forward and/or level position. To understand and prepare for this possible effect, you should first try to experience it at low speeds, gradually increasing speed so that you will know what to expect and determine when the peak should be removed for higher-speed riding.

# VX-PRO<sup>3</sup>

More innovation, more protection, more ventilation, more of everything you expect from an Arai.

INTERMEDIATE-ROUND OVAL

### Round Instead of Ridged Shell

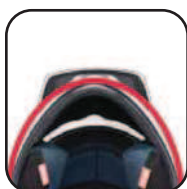

We believe a smooth surface is better at helping the shell do the job it's made for: quickly and smoothly dissipating impact energy. And, like our Rounded Chinbar below, it's also less likely to catch and dig in during a spill.

### Top-Mount Ventilation Diffuser

These large ventilation ducts utilize low pressure areas behind the vent to draw strong airflow through the

helmet for truly impressive ventilation performance, even at moderate speeds on tighter tracks. Designed to be frangible in the event of an impact, these vents will breakaway easily so as not to interfere with the helmet's #1 job of impact energy management.

### Rounded Chinbar and Stainless Grill

The VX-PRO<sup>3</sup> chinbar design continues with Arai's unique rounded shape with less protrusion, making it less likely to catch and dig in during a spill. The expanded Stainless Steel mesh provides a strong barrier against roost, with a smooth surface to resist the buildup of mud and debris.

### Chinbar Forward Tilt

The VX-PRO<sup>3</sup> chinbar is close-in to maintain the rounded shell shape for better strength, and to also incorporate a design that provides excellent room so you don't feel too "confined."

### Peak Design

The PRO<sup>3</sup>'s radical peak design actually scavenges and forces more air into the forehead vent-ports for improved cooling, while at the same time using multiple relief-ports to reduce "bucketing" at higher speeds. The peak is attached with plastic screws designed to shear off if impact forces become too great, in order to enhance impact-energy management and to prevent snagging and twisting.

### Emergency Cheekpad Release System

Developed to allow easier access to an injured rider, the VX-PRO<sup>3</sup>'s cheekpads slide out easily via the integrated pull-tabs built into the underside of the cheekpad — making helmet removal much easier for trained medical personnel.

### Interior

The head comfort liner and cheekpads are fully removable, washable and replaceable. They use Arai's Dry-Cool material for superior heat transfer and drying time. A removable/washable/replaceable chinstrap cover completes Arai's total package of interior washability.

## Anti-Fog Lenses for Arai Helmets

Pinlock lenses are created out of a moisture absorbing plastic. The silicone seal on the lens creates an airtight pocket between the shield and lens. The lens is placed between two adjustable eccentric pins, making it easy to install or switch lenses as weather conditions change.

### MAX VISION BV (Brow Vent) INSERTS

Offers complete field-of-view coverage

- For SAI faceshields (Arai Corsair-V, RX-Q & Vector-2)

### STANDARD INSERT
