

MOTORCRAFT® FUEL SYSTEM MAINTENANCE KIT

PM-30-K

Today's high pressure, high heat engines demand clean combustion chambers, fuel injectors, and intake valves to function efficiently. Fuel, oil, and other operating variables can contribute to carbon buildup inside the engine. Even small amounts of carbon deposits on engine components can lead to drivability issues and reduced engine performance.

The Motorcraft Fuel System Maintenance Kit is our premium offering. The kit is quickly administered by a Ford Dealer or Lincoln Retailer technician with special equipment and is formulated to provide noticeable drivability improvements.

Features and Benefits:

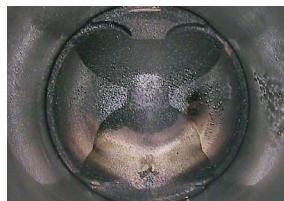

- Restores engine performance
- Restores power
- Effective in all gasoline engines

Recommended at every other oil change.

Use these Motorcraft fluids in Ford & Lincoln vehicles for optimum maintenance of gasoline engines.
