SMART BLIND SPOT DETECTION^{5*} DW

Radar is designed to detect vehicles in your blind spot. It can also warn you when it detects your vehicle switching lanes unintentionally, and, in some cases, will apply localized braking pressure to help guide your vehicle back into its lane.

LANE DEPARTURE WARNING SYSTEM^{5*} DW

If the system detects you drifting too close to lane markers without signaling, it can alert you with a warning beep.

LANE CHANGE ASSIST^{5*} DW

When you put your blinker on to change lanes, it is designed to warn you of vehicles in adjacent lanes approaching from behind.

BLIND SPOT DETECTION^{5*} DW

Radar works to detect vehicles in your blind spot and give visual and audible alerts to help you avoid hazardous lane-change decisions.

Senses, alerts, and helps **STOP**

Who needs a backseat driver when you can have the help of all these available advanced features?

FORWARD COLLISION WARNING SYSTEM^{5*} DW

This system is designed to detect slowing or stopped traffic ahead, and can alert you if you get too close.

PEDESTRIAN DETECTION^{5*} DW

Should a pedestrian cross your path, the system is designed to detect and alert you to the potential hazard.

AUTONOMOUS EMERGENCY BRAKING^{5*} DW

This system is designed to detect and monitor vehicles ahead of you and automatically apply the brakes if it determines a crash is imminent.

BRAKE ASSIST SYSTEM

If you suddenly slam on your brakes, it's designed to sense the urgency and apply full brake power, which can help shorten your braking distance.

ELECTRONIC BRAKE-FORCE DISTRIBUTION

Based on the vehicle's weight distribution, it helps adjust the balance of brake power accordingly.
