2018 LINCOLN NAVIGATOR – CONNECTIVITY

The benefits of connectivity for Lincoln owners range from starting their vehicle from their phone to a multitude of in-vehicle entertainment. It's all part of a client-centered focus on elevating the ownership experience.

The LincolnWay app, available through iTunes and Google Play, offers Lincoln owners the ability to start, lock, unlock and locate their vehicle, as well as schedule remote starts. Owners can use the app to pay online, schedule Lincoln's exclusive Pickup & Delivery service, obtain assistance from a Lincoln concierge, even find and pay for parking.

SYNC® 3 with both Apple CarPlay™ and Android Auto™ compatibility concisely presents audio, phone, navigation and other features on the front touch screen of Lincoln vehicles.* Steering wheel-mounted controls and simple voice commands allow the driver to place and answer calls, as well as manage music from different devices with enhanced voice activation.

Alexa and Lincoln: Lincoln will offer services from Alexa, Amazon's cloud-based voice service, available to Navigator owners through SYNC 3 and AppLink™. From the vehicle, clients can ask Alexa about destinations, such as restaurants, and have directions sent to the vehicle. Clients can enjoy music, audiobooks and other services, and those with Alexa-compatible smart devices installed in their homes can access controls to turn off lights or activate security systems. Alexa connectivity will be available for all Lincoln vehicles by the end of this year.

Entertainment on the go: An available rear-seat entertainment system allows passengers to stream content wirelessly with an Android device (or Apple device, via a USB) to one of the 10-inch adjustable screens mounted securely on the rear of the front seats. Content also can be accessed through more traditional devices like an SD card, an HDMI cord or a USB, as well as through SYNC AppLink, which permits the front-seat passenger to monitor and choose viewing content. Each screen can display different content, allowing a multitude of options for each passenger. Through Lincoln's agreement with Sling Media, those who own a Slingbox can access their TV channels on the go.

Wireless charging; standard Wi-Fi: The all-new Navigator is the first Lincoln to offer wireless charging. The wireless charger is a flat pad rubber surface in the media bin located next to the dual USB charge/SYNC data ports. When charging a phone equipped with wireless charge capability, a popup at the top of the screen indicates that the wireless charger is active. Standard Wi-Fi allows up to 10 mobile devices to be connected, and there are power outlets and USB ports for each row.

*SYNC 3 is offered on vehicles from 2016 on.
