

## MAINTENANCE DESCRIPTIONS AND BENEFITS

- **WORKS PACKAGE \$49.95**

A works package includes an oil change, tire rotation and complimentary multi point inspection. Each multi point inspection includes; lubing all door latches, checking and topping off all fluids, checking belts, hoses, suspension components and filters. We will also check tire wear and tread depth, braking system and the alignment. Keeping your oil changed every 5,000 miles is recommended to keep the engine components lubricated and running properly.
- **ENGINE AIR FILTER \$24.95**

It is recommended by Ford to check and change the engine air filter every 30,000 miles. Changing the engine air filter prolongs engine life by capturing dirt and debris from getting into the engine possibly damaging internal components including the engines cylinders and pistons.
- **CABIN AIR FILTER \$49.95**

Ford recommends checking and changing the cabin air filter every 20,000 miles. By doing so keeps dirt and debris from clogging up the filter and compromising the HVAC system. This also keeps the air flowing in your vehicle preventing any foul odors.
- **POWERING STEERING FLUID SERVICE \$74.95**

This is often a fluid exchange not included in the maintenance plan but still important to check and exchange as needed. Power steering fluid can become contaminated and cause stress to your power steering pump and cause a much more expensive repair in the future. This fluid is checked in every multi point inspection performed and will be advised to change as needed.
- **ALIGNMENT \$79.95**

Misalignment can cause off center steering, uneven tire wear and can cause a vibration in the steering wheel. Leaving a vehicle misaligned can cause your tires to need replacement before normal time they would usually need to be replaced.
- **BRAKE FLUID SERVICE \$109.95**

Brake fluid is designed to absorb moisture as most of the brake components are made of metal. Checking fluid for contamination will prevent the chance of

corrosion to brake lines and other brake components, avoiding a much more costly repair. This is generally not included in the maintenance plan but a general rule of thumb is to replace brake fluid every couple of years. This fluid is also checked during every multi point inspection performed and advised to change as needed.

- **TRANSMISSION FLUID SERVICE \$174.95**

Certain models of Fords recommend transmission fluid to be exchanged between 60,000 and 100,000 miles depending on the model. This protects the transmission from wear, preventing the need for more expensive repairs and keeps the vehicle shifting smoothly down the road. We replace the old fluid with new fluid until all old fluid is cleaned out and transmission fluid is clear.

- **COOLANT FLUID SERVICE \$129.95**

Exchanging your coolant as recommended in your maintenance guide will prevent coolant from becoming acidic. If this happens it will break down and can damage the water pump bearing, rubber hoses and aluminum components of the engine. All of which can lead to a much more expensive repair down the road. A coolant service consists of draining the old fluid and replacing with new fluid until clean.
