Select Replacement Prop

Use the chart below to locate the length and force of your prop to select the right replacement.

**Example:** Length is 14" and Force is 40 pounds or 175-185 newtons select prop 9.

Note: If there are 2 props, replace them both to keep door lift balanced.

GAS PROP JUST GOT EASY!

Select Replacement Prop

Refer to the Selector Guide Booklet for more detailed information, including installation.
Gas Spring Fit and Selection
If you already have a gas spring installed selecting a replacement can be as simple as A-B-C.

Remove the spring from it’s mounting brackets.

A. Measure the extended length from center mounting hole to center mounting hole (See “A” in diagram).

B. Measure the amount of piston that is exposed while extended. This is called the stroke of the gas spring (See “C” in diagram).

C. Using our simple to read chart, find the extended length that is the closest to your current unit. Then use either the stroke measurement or subtract the stroke from extended and select the compressed sizes that are closest to your current spring.

(The measurements do not have to be exact but the closer you can match the original the easier it will be to install.)

Selecting the force - If your current spring has a stamped label the force should be listed within that number. Usually the last 2 digits or often followed by the letter N which is Newtons. 1 pound equals 4.4482 Newtons. This is the pounds of force being exerted to open or hold open the door or platform. It does not equal the weight of the item being lifted. Trial and error is not the best way to find that number.

Selecting a gas spring for a project that does not already have brackets installed can be a much harder task. This normally requires a computer program and numerous measurements to make sure they operate properly.

Proper Disposal Requirements:
1. Caution, safety glasses and protective gloves should be worn for this procedure.

2. Secure the gas spring using a vise with the piston end tilted down at least 30 degrees, let stand in this position for 30-60 seconds to allow the oil to settle in the lower section of the tube.

3. Caution, a gas substance will escape during this procedure. Using a tubing cutter or hacksaw, cut the top end of the tube 1/2” down from the welded end fitting or stud.

4. Place the tube open end down in an approved container to drain the remaining oil.

5. Once tube has drained, discard the gas spring container to drain the remaining oil.

Feel free to contact JR Products at 800-269-7622 for assistance on selecting or replacing your gas spring.

DOOR HOLDERS

LOW PROFILE DOOR HOLDER

A unique door holder made of polymer plastic. It will not rust or fade and provides a secure catch when connected. Since it is a flexible polymer, it also works as a bumper when not in the catch position, reducing damage to your unit from the door. It can be used in any application from entry doors to small uses such as compartments.

47840 Low Profile Bumper Door Holder #10665 1

UNIVERSAL BUMPER

FOR T-STY LE DOOR HOLDER

Add this bumper to your door holder and it will prevent your door from hitting your RV.
