### LIFESAFE SUPER SEAL TAPE

Emergency repairs, stops leaks, forms solid rubber wrap. Strips clean, leaves no messy adhesive or residue. Holds 100psi at 220°F. Works wet or dry, greasy or dirty. Shrinks about 3% to form an airtight, waterproof seal. Use for outdoor plumbing, automotive hoses, broken water lines, electrical cables, garden hose repair, boat and RV repair, wire bundles, extension cord connectors, sports equipment, tool grips, power tools and rope ends.

47900 Super Seal Tape, 1" x 16 ft. #RE3845ES 12

Full one-year warranty.

### “ROCKET” EXTRUDED ABS WATER TANKS

The only solvent-weldable water tank; add fittings anywhere. Lightweight, completely algae-free black ABS plastic. Tasteless, odorless and non-toxic. Will never rust or corrode. Made of high-grade plastic polymers. One-piece extruded construction eliminates the possibility of leakage. Baffled every 18 inches for surge control. Easily installed, universal design. Supplied with 3/8" threaded, fitting inserts; three on each end. Choice of fill fittings: elbow, straight or threaded with cap. For non pressure applications.

## SEA TECH QUICK CONNECT FITTINGS

Sea Tech, Inc. was established in 1995 and provides reliable, high-quality, cost-effective solutions for water connection needs. Sea Tech's Quick Connect Water System offers a wide range of standard 1/2" Nominal (5/8" O.D.) fittings and tubing, plus 3/8" Nominal (1/2" O.D.) and 3/4" Nominal (7/8" O.D.) adapters. Fittings have 2 patent pendings on the collet and O-ring guide designs.

### CONNECT TO MULTIPLE MATERIALS!

The Sea Tech System incorporates Stainless Steel Gripping Teeth in its Collet. These corrosion-resistant teeth allow the connectors to interconnect with multiple materials without the need for special tools. • Copper. • CPVC. • PEX, LDPE, MDPE, & HDPE tubings.

### THE O-RING GUIDE IS THE KEY!

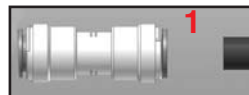

Sea Tech connectors incorporate an exclusive O-ring Guide for improved reliability. This unique feature insures zero-leak connects by: • Protecting the O-ring from damage during assembly. • Increasing the connector's side load capacity. • Correctly aligning the tubing with the O-ring every time.

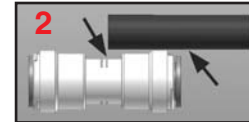

### MAKING A CONNECTION

Cut the tubing to length using the Sea Tech tubing cutter or similar. Slight pressure as if to twist the cutter around the tubing will aid cutting.

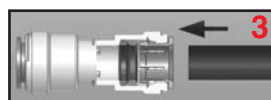

**1** Cut the tubing square using a proper tube cutter. It is essential that the outside diameter of the tubing be free of scratches and damage. The outer surface of the tube needs to be smooth and clean.

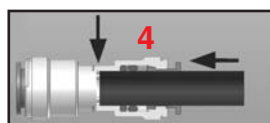

**2** Mark the insertion depth on the tubing end. Sea Tech connectors have an insertion depth line molded onto the outside of the connector bodies.

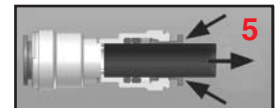

**3** Push the tubing into the connector until the insertion mark on the tubing meets the edge of the connector collet.

**4** Make certain to push the tubing completely into the connector until it comes into contact with the internal tubing stop.

**5** To disconnect ensure the system is depressurized before removing connectors. Push the collet in squarely against the face of the fitting. With the collet held in this position, tubing can be removed. The connectors can then be re-used.

### ROTATES UNDER PRESSURE!

After a joint is made the tubing can still swivel while connected, even under maximum pressure. The connector's ability to rotate under pressure makes it the ideal connector for vibrating and dynamic applications.

### HIGHEST FLOW!

Because Sea Tech connectors join the tubing on the outside, there is no barb fitting on the inside, so flow capacity is increased by more than 30%. Only Sea Tech connectors offer complete flow, allowing for a more efficient water system.

Sea Tech fittings are certified and tested to: • NSF-14; • NSF-641; • CSA B137.5; • ASTM F877. **RVIA Approved.**

## SEA TECH QUICK CONNECT FITTINGS

Please note during 2011 some SeaTech items will change their packaging.

Sea Tech connectors utilize a swivel nut with NPS straight threads and a cone seal. This allows the installer to thread onto NPT, NPS, BSP, and most 1/2" male threads without tools or thread sealant. Simply thread on, hand tight, for a zero-leak seal.

3/8" size fittings can be developed by simply snapping a Reducing Stem into any 1/2" fitting.

### CREATE MINI-MANIFOLDS!

With the Sea Tech Water System small lengths of tubing can be eliminated by using stackable connector configurations. Simply snap together Tees and/or Elbows to create a mini-manifold of fittings. Because all connectors rotate, the direction of the tubing can be orientated by a simple twist, reducing the amount of tubing required to plumb a water system.
